Experiment-2

Write the steps to reduce room noise using Audacity to remove or reduce the noise?

step 1. Select the "silent" section of your audio, where it is just noise.

step 2. Go to the effects menu and click Noise Removal

step 3. Click Get Noise Profile.

step 4. Select all of the audio from which you want that background noise removed.

step 5. Go to the effects menu and click Noise Removal.

step 6. Adjust the settings if necessary (defaults are fine) and click OK.

step 7. Listen to ensure your audio doesn't sound like it's underwater.

Q→ Load any song in Audacity and then use effects→
vocal removal, remove the vocal from the song.

→ Steps

1. Load any file in audacity

Open Audacity, then choose File→open and select
the track you wish to remove vocals from.

2. Split the Track

once your track is loaded into Audacity, select the
drop-down menu from the track, then choose
option to Split Stereo Track.

→ Now your song is split into its left and right
channels.

3. Invert Bottom channel

Click on the bottom channel to select it, then
choose the option for effect→Invert from the
menu bar.

4. Set Each Track to Mono

Last thing to do is to set each track as mono.
Select the dropdown option for the top track,
then choose Mono. Now do the same for the
bottom track.

q→ Create a Audio Clip by mixing two songs of your choice and a sound of any instrument which matches the same?

→ STEPS:-

STEP 1: Open Audacity

STEP 2: Select the File Menu and select OPEN system then browse the song you want to edit.

STEP 3: Now open File Menu and select IMPORT system & then select the audio option for inserting another audio clip.

STEP 4: You are adding 2 audios in a same project.

STEP 5: Now select the ↔ (TIME SHIFT TOOL) for shifting the second audio to the end of the first audio.

STEP 6: Save the Project where you want and YOU ARE READY TO GO.
The AUDIO 2 will be played just after the FIRST AUDIO ends.
